Sales Dashboard — Insight Summary

Prepared from the supplied Excel workbook | January–February 2025

Objective

The dashboard summarizes recorded sales by product, category, month, and region to help identify sales concentration and areas for further investigation.

Total recorded sales	Leading category	Leading product	Leading region
1,552,500	**Electronics**	**Laptop**	**West**

Key insights

• **Product performance:** Laptop sales were 585,000 and smartphone sales were 540,000. Together, they represented approximately 72.5% of recorded sales.

• **Category performance:** Electronics accounted for 1,125,000 (about 72.5% of total sales), followed by Furniture at 309,000 and Accessories at 118,500.

• **Monthly comparison:** January recorded 925,500 and February 627,000. February was 298,500 lower (about 32.3%). Because only two months are shown, this is a short-period comparison, not a long-term trend.

• **Regional performance:** West led with 514,500, followed by South (417,000), East (315,000), and North (306,000).

Recommendations

• Review inventory and sales drivers for laptops and smartphones, the products contributing most to recorded sales.

• Investigate the lower February result by checking order counts, product mix, promotions, and seasonality before deciding on a cause.

• Study performance in the West region and assess whether effective practices can be applied elsewhere.

• Track additional months and include costs or margins before drawing conclusions about profitability.

Notes

The figures are based on the supplied workbook's sales summaries. No currency is specified, so no currency symbol is shown. Sales values alone do not indicate profit or prove the cause of a change.
